

Canary System Overview

MAKING THE MOST OF YOUR PROCESS DATA

Session Agenda

AGENDA
OBJECTIVES
RATIONALE
HISTORY

- Canary Company
- Canary System Overview
- SA Market Development
- Opportunities with Canary

Objectives

- Equip you with knowledge to capitalize on new opportunities.
- Become familiar with tools that are available to you right now that can help you make strides in your digital transformation journey.
- Understand the ways that Canary can help you transform and optimize your business.

Canary Rationale

We understand that engineers, data scientists, plant managers, and everyone from the shop floor to the C-Suite all just want to use their data.

Problems:

- Prohibitive licensing costs
 - Underpowered solutions
 - IT/OT divide and incongruent priorities
 - Limited scalability
 - Rigid architectural requirements
 - Security
 - Deployments, updates, and administration
 - Vendor lock in
-
- The Canary System was designed to address all of these issues and more.

Company History

- Founded in 1985
- Over 20,000 installations
- Over 70 Countries
- Used in every major industry
- Global network of Distributors and SI Partners
- Canary is owned and operated by the original founders and their families with no outside investment or controlling interest.

Company Strategy

- Go to market through Certified Partners
- Focus company on product development and support
- Maintain 100% control and ownership of company with HQ in Central PA
- Canary is committed to staying platform agnostic.

Enterprise Applications

- Murphy Oil
- 1.8 million tags – AWS Cloud instance with more than 40 asset models
- Aera Energy
- OSIsoft replacement, 1.5 million tags and over 100k calculations
- Colonial Pipeline
- 40 site historians and enterprise historian
- Kinder Morgan
- 70+ Sites with Enterprise Historians
- US Navy
- Systems on more than 200 vessels including all nuclear subs and carriers
- Boardwalk Pipeline
- Enterprise servers and regional data centers totaling over 500k tags

The Canary System

- Proprietary NoSQL Time Series Historian Database built for industrial automation.
- Canary makes it easy to use your process data.
- We guide our customers to success along the following three steps:
 - Collect and Store
 - Assign Context
 - Maximize Your Operation

Step 1: Collect and Store

- Securely collect process data from edge and IIoT Devices.
 - Store and Forward
- Log millions of tags
 - Log Millions of Tags...Over 2 million per Historian, or tens of millions when clustered.
- With loss less compression
 - Forget interpolated, averaged, or dropped data... Canary preserves the original values forever.
- And incredibly fast performance
 - Write 1.5 million & read 2.5 million updates per second with unchanging performance as you grow.

Step 2: Assign Context

- Transform your complex data into clear easy to understand information.
- Views
 - Build virtual data models of the Historian.
- Asset Modeling
 - Change tag names, organize tags based on equipment, filter by condition, and make templates for visualization.
- Calculation Server
 - Don't waste time in SCADA or PLCs... write expression that apply to all asset instances including backfilled data.
- Event monitoring
 - Create rules to monitor for condition-based asset events.

Maximize your Operation

- Analyze your operational health on any device and make better decisions.
- Visualization
 - Build dashboards, trends, reports, and much more.
- Excel Add In
- Data Connectors
 - Integrate the data with your favorite applications and platforms.

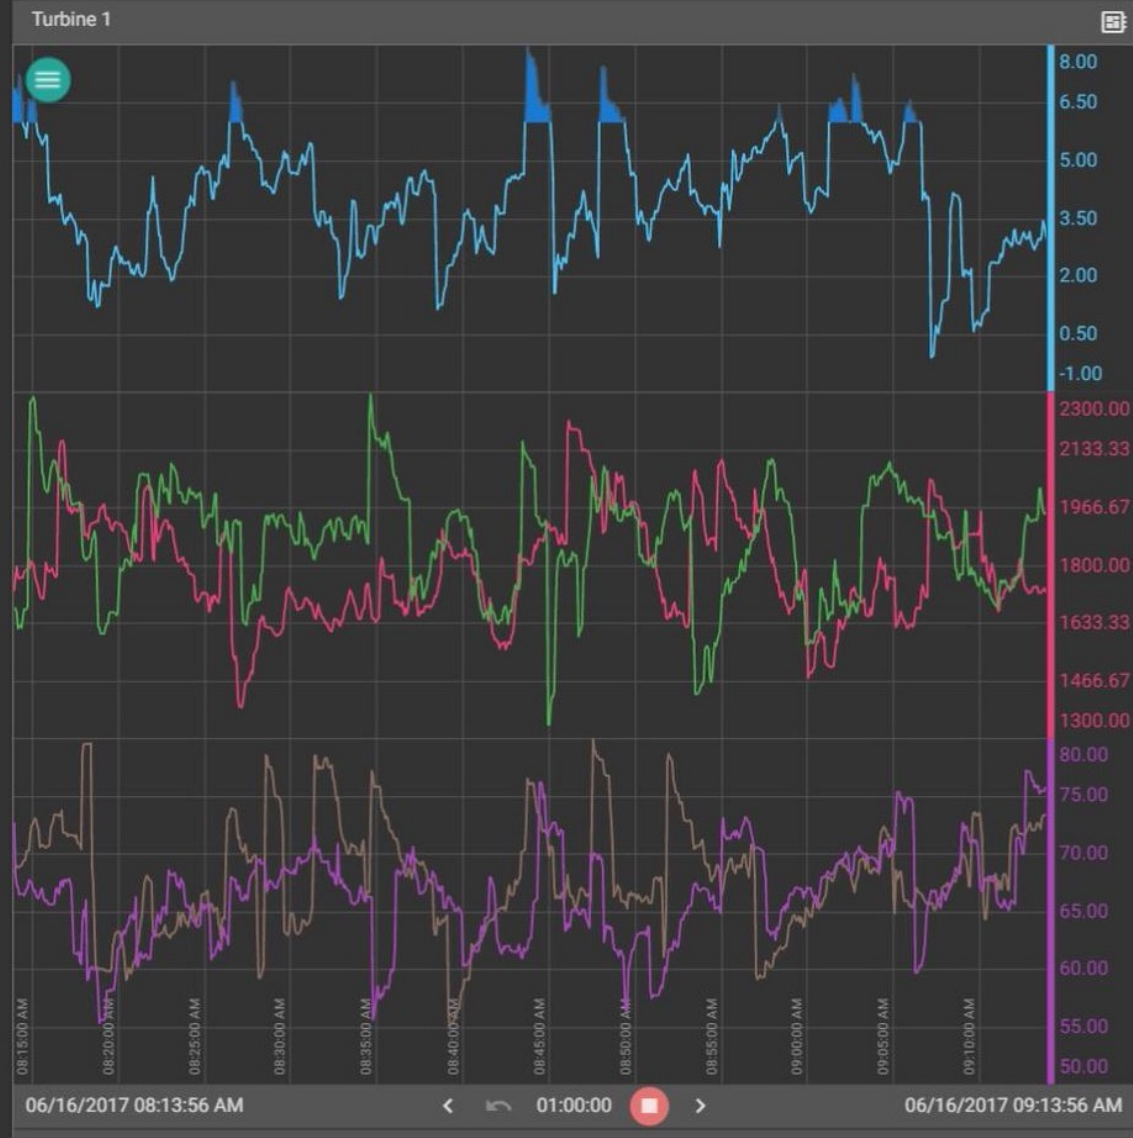

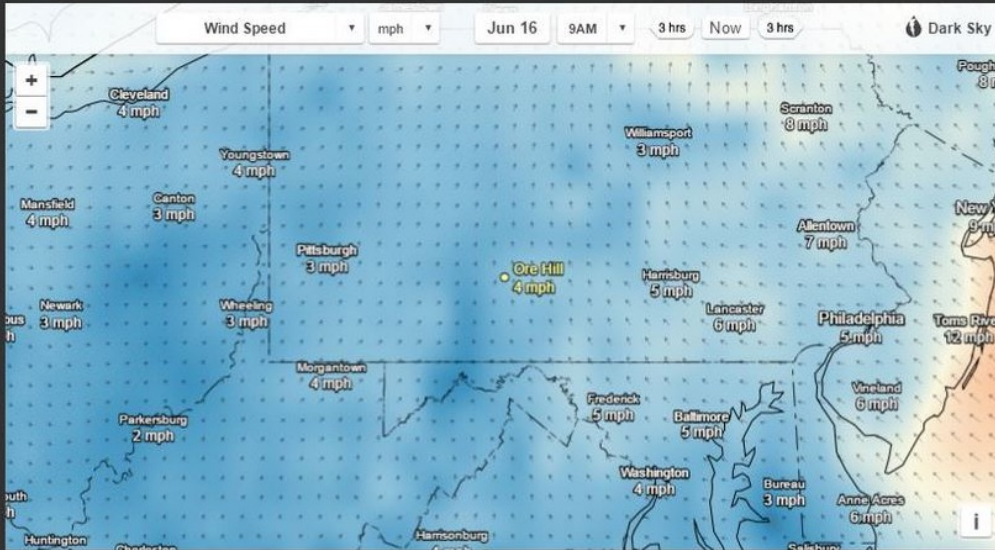

The Canary Module For Ignition

- Log Data Natively
- Ignition Tag History Provider
- Performance that Scales
- Free to download from Ignitions Module Showcase
